Theoretical Questions(Answer in 1-3 lines)

1. What is Microsoft Excel and what is it used for?
2. What is a Workbook in Excel?
3. What is a Worksheet in Excel?
4. What is a Range in Excel? Give an example.
5. How can you move a range of cells?
6. What is the Ribbon in Excel and what does it contain?
7. What are Tabs and Groups in the Ribbon? Give one example of each.
8. How do you collapse and expand the Ribbon?
9. What is the purpose of the Format Cells dialog box?
10. What is the difference between Find and Find & Replace?
11. How do you insert a row and insert a column in Excel?
12. Why is it useful to convert data into a Table in Excel?

Practical questions (Perform using the attached dataset)

Use the provided "Employees_data" Excel file for all practical questions.

1. Open the dataset and identify the range of your data.
2. Move the first 5 rows to the bottom of the dataset.
3. Copy the Employee Name column to a new worksheet named "Names".
4. Insert a new row at the top with the title "Employee Data Sheet".
5. Insert a new column after "Job_title" named "Joining Year".
6. Convert the dataset into a Table using the Ribbon.
7. Collapse the Ribbon and then expand it again.
8. Format the Salary column in Currency format.
9. Apply bold formatting to all Employee Names.
10. Calculate the total salary (rupees) of all employees and display it below the Salary column.
11. Use Find & Replace to change "Manager" to "Team Lead" in the Job Title column.
12. Change the tab color of the sheet containing the dataset to blue.
13. Freeze the top row of the dataset so that headers remain visible while scrolling
